

Design Evanston **Walgreens “Net Zero Energy Store”**

Join us for a brief presentation and “hard hat” tour.

Walgreen’s hopes that its experimental “net zero energy store” in Evanston will produce more energy than it consumes. Alternative energy equipment at the store under construction includes more than 800 solar panels on the roof, two 35-foot wind turbines and a geothermal energy system.

A recent New York Times article features “our” Walgreens:
